

Borough of Madison, New Jersey

COVID-19 Update 4/13/22

Since the arrival of COVID-19 in March 2020, there have been a total of 2,523 confirmed (PCR test) and 630 probable (antigen test) COVID-19 cases reported in Madison Borough*. The chart to the right shows the trend in newly reported cases throughout the pandemic. Home-based COVID-19 tests are not required to be reported to public health authorities and thus remain unrepresented in case-count data. Fortunately, the December 2021-January 2022 spike in COVID-19 cases driven by the highly-transmissible Omicron variant receded quickly. During this latest peak, total hospitalizations for COVID-19 surged across New Jersey, although the overall proportion of COVID-19 cases requiring hospitalization was lower than the 2020-2021 winter season surge. According to the [CDC Nowcast model](#), in the week ending April 9, 2022, the Omicron sub-variant BA.2 is predicted to be identified in 92.5% and the original Omicron variant B.1.1.529 in 7.5% of samples tested in the NY/NJ region. More information on these trends can be found on the [NJDOH COVID-19 Data Dashboard](#).

*More information on the definitions “confirmed” and “probable” as well as “PCR” and “antigen” tests can be found [HERE](#).
